Using state of the art *3D ultrasound technology* you can see images of your unborn baby. Peering into a portal, you can take a peek into their world; a world where they live for approximately 9 months. Watch them in action. Observe them as they come to life in your womb.

We offer a 30 minute session which gives you the opportunity and time to really *see* greater definition and subtle movements of your developing baby...to *see* how your baby's face will actually look, to *see* the rounded cheeks, to *see* the beating of their heart!

This unique experience offers three-dimensional color images capturing subtle movement. It is best to be seen between 26 weeks and 34 weeks gestation. This is strictly an elective procedure and is not covered by insurance. This does not supplement or detract in anyway from the medical care you receive from your medical provider.

One-to-One 3D Package:

30 minute "guided tour"

CD with 15-30 high resolution color still images suitable for
printing and e-mailing

Gender determination if baby cooperates

Appointment times available

Only \$250.00** ...for a memory that lasts a lifetime!

Call One to One FemaleCare, PA to inquire about availability!!!

(973)683-1400

** \$250 payment is expected at the time of service. No guarantee of images due to the fetus position.
